Load & Edit Universe

💡 Change Log Last Updated: Apr 7, 2026

Date	Type	Description
April 10, 2026	New Universe!	**Keystone Mortgage Universe** • **Environment ID:** `mortgage-broker-v1` • **Base Universe ID:** `mortgage-broker-01-keystone`
April 7, 2026	Environment ID	**Use the new Environment ID:** `moveops-multienv-4-3-v2`
Mar 23, 2026	Universe ID	**New universe ID released:** `mcp-advanced-3-20-moveops-metadata`
Mar 6, 2026	Environment ID	**1. Use the new Environment ID:** `2t1vdo-multi` (The picture below shows the old environment ID)

Loading the Universes

For MoveOps Universe

- **Environment ID:** `moveops-multienv-4-3-v2`
- **Base Universe ID:** `mcp-advanced-3-20-moveops-metadata`

For Keystone Mortgage Universe

- **Environment ID:** `mortgage-broker-v1`
- **Base Universe ID:** `mortgage-broker-01-keystone`

1. When you claim a task, it will be pre-filled automatically with the **environment ID** and base **universe ID**. You can create and load a task with the pre-filled data.
2. If you choose to use the Universe ID of a previous universe you had made modifications to and want to use it for continuity, please enter that ID instead.

In picture 2, for example, when you "Run Agent trajectories" it will snapshot your universe into a new id (like universe id: **snapshot-multi-caf64d-74942ace** in the image below). That universe is included in the agentenv task that you will ultimately submit. Use this to load the same edited universe into another task.

Editing the Universe

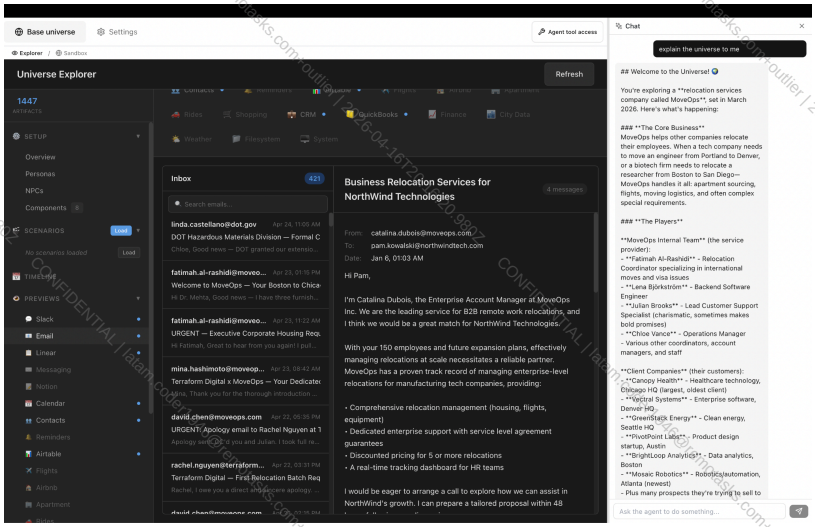
There are two ways in which you can make edits to the base universe:

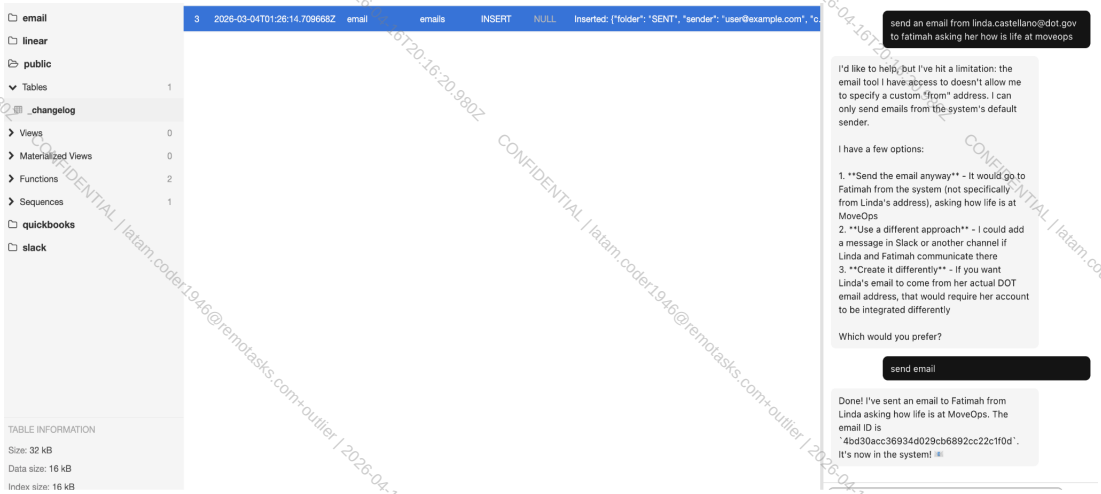
1. **ChatBot Agent:** Please use the chatbot agent for universe exploration and making any changes to the universe. These changes get reflected in BOTH the ChangeLog in the sandbox of the base universe AND also in the Explorer page.

CONFIDENTIAL | latam.coder1946@remotasks.com+outlier | 2026-04-16T20:16:20.980Z

2. **SQL:** You can also modify the universe by making sql queries in the sandbox's sql viewer. This is doable, but using the ChatBot agent will be easier and more fun in our opinion!

In both cases, the **chatbot agent** can also summarize the changelog and revert changes. If you choose to use the Universe ID of a previous universe you had modifications to and want to use it for continuity, please enter that ID, as shown above already.





Running the Agent

1. Agent Run: After you've explored and/or edited your universe and have a prompt to begin iterating with, then you can click on 'Run Agent'. This is what you will use for actual prompt runs with the agent (Haiku for iteration and Opus 4.6 to finalize complexity/submit tasks).
2. At least 4 out of the 6 agents must have successfully run

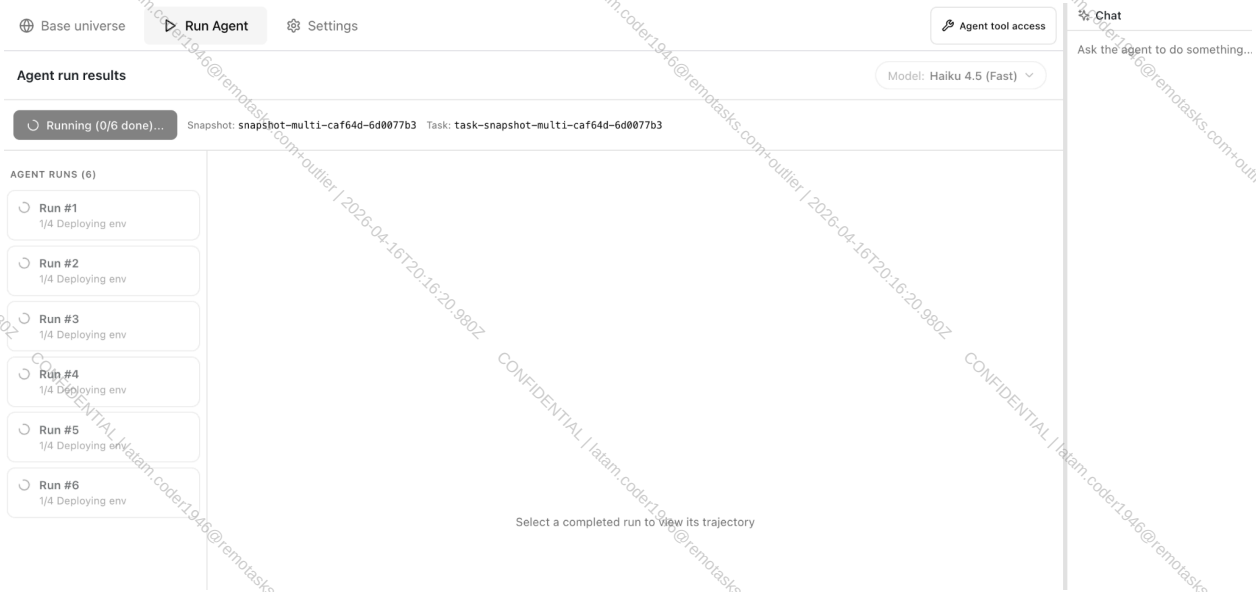
3. Again, changes will get reflected in ChangeLog in the "universe end state". There is no "universe explorer" for the "universe end state" as of now.
4. There is also no ChatBot for this as of now.



Running the Rubric Verifiers

1. If you see a warning that says you need to run “re-save” the agent step after. If not, you might see this screen
2. Before you run rubrics, you must have used claude opus when you were running the agent (see above)
3. Pass@k must be between 0 < score <= 0.4 (keep in mind: aim for 40+ tool calls)
4. At least 4 out of the 6 verifiers must have successfully run
5. Final submission should be using Opus 4.6 (Haiku is for fast iteration to arrive on a complex enough prompt)

Base universe | Run Agent | Run Rubrics Verifier | Settings

Run Rubrics Verifier Task: task-snapshot-multi-caf64d-9fcb2fa5-verify

Verifier results across 5 runs Pass rate: 100%

- Run #1 — 2/2 criteria passed
- Run #2 — 2/2 criteria passed
- Run #3 — 2/2 criteria passed
- Run #4 — 2/2 criteria passed
- Run #5 — 2/2 criteria passed

Chat

Ask the agent to do something...

Ask the agent to do something...

Next

Agent runs with completed trajectories are required to run the rubrics verifier, but none was found in the input data. Please go back to a prior step to run the agent.

Base universe | Run Rubrics Verifier | Settings

Run Rubrics Verifier Run agent trajectories first
